Hello Kane

My teams recommendation in regards to the language problem is simply to add a phone number to assist if you have language issues (personally agree with as it seems the easier alternative).

For the second issue, you can develop your project as you see fit, in that regard. Both have their advantages, just remember that it has to meet the requirements set forth for the permits scenario.

On a more useful note, in regards to the second issue. Personally I believe the website should be used in such a way that anyone can use it, and that depending on who you are, different functionality is offered. We are going with the same approach in our project.

Kindest regards

Jesse St.Germain

Subject: User Stories and git

Hello Jesse,

We have further expanded/fleshed out our user stories and welcome feedback, though instead of attaching them to the email and sending them to you directly I'd like to ask for your bitbucket account so I can add you to the group and you can see things as we update them (you can view files through the website if you are not confident with git). In future I can then simply notify you when important things change that we would like you to be aware of.

Additionally my team and I have a query about one of the additional requirements you outlined, the one about support for non-English speaking individuals or individuals who's first language may not be English. When you consider (as far as we're aware) that staff/students/general public aren't directly using the website but instead department employees, is support for other languages not outside the scope of the website and instead in the hands of the department to ensure that their employee's speak a number of languages?

And finally, while this may make the previous query redundant/not an issue, we were wondering whether we should instead design this website and interfaces to allow members of the general public, staff and students to apply for permits directly rather than having to go through a department/general building as it seems it would be much more useful to be able to apply for queries at home/away from campus or just in general by themselves.

Sincerely,
Kane.
